WATER PRESSURE

A Little Change Can Make a Big Difference

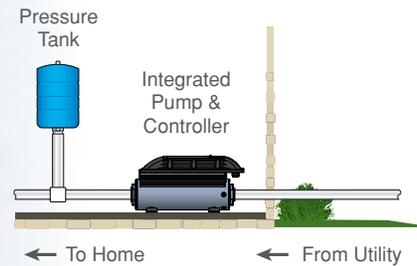

Whether you have a municipal system or a private well, Franklin Electric has a constant pressure solution for your home.

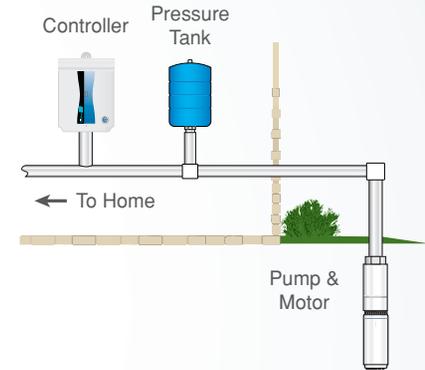

- Traditional municipal systems use city water lines to deliver water to your home. Depending on pipes and distance from the water main, pressure may not always be adequate.
- Traditional water well systems use a single-speed motor and pump to move water from the well to your home. However, when your demand for water increases, the pump speed stays the same.

By using a Franklin Electric constant pressure controller to vary the speed of the pump, your water pressure will keep up with your demand.

Constant Pressure for Municipal Systems:

Constant Pressure for Private Well Systems:

So stop scheduling your day around water usage, add value to your home and use water more effectively. Finally, it's possible to run the shower, wash the laundry and water the garden, all at the same time – with increased and consistent pressure.
